Introduction & Purpose

This report is prepared each year by the Planning & Development Services Department to provide information regarding traffic volumes on roadways in the city. The traffic volumes are collected annually at designated traffic count locations. For analytical and historical purposes, every attempt is made to count the same locations each year. Additional stations are added as new roadways are constructed or traffic volumes increase along existing roadways to warrant counts being collected.

The main purpose of this report is to serve as a “snapshot” of the traffic volume conditions at a fixed point in time. Traffic data from different time periods can be used to analyze trends and to assist in problem areas. Traffic data is the foundation of many specialized studies, such as warrant studies for traffic signals, and is used in part when updating the city’s *Mobility and Master Thoroughfare Plan*. Also, the traffic count data is provided to the Planning and Zoning Commission and City Council to assist them in evaluating planning cases such as rezonings, site plans and plats.

This report also serves as a valuable economic development tool for real estate brokers, lenders, developers, and others with similar interests. Traffic volume is a critical factor associated with many of the decision points made by companies, particularly retailers, when looking to locate businesses in a particular region. This traffic count report will also provide current traffic data for any area of interest in the city to residents, property owners, and other interested parties.

This year, two-direction counts were taken at **96** different locations within the city boundaries. This report will present the basic traffic volume data recently collected at these locations. Traffic counts were taken during the weekdays from April 28 to May 9, 2008.

The 2008 report is an abbreviated version of the city’s annual Traffic Count Report that includes one table indicating twenty-four hour counts and peak-hour traffic times for all arterial and major collector roadways in Southlake. Additional historical data and analysis may be found in previous editions of the Traffic Count Report available from the Planning & Development Services Department.

Methodology

In April 2008, the City of Southlake contracted with Quality Counts, a traffic counting firm located in Dallas, Texas, to take traffic counts at designated locations in Southlake. The data was downloaded to a raw data file, and a printed copy of this data was provided to the City. Between April 28 and May 9, 2008, traffic counters were placed at ninety-six (96) locations throughout the city, with counts taken in both directions of traffic flow during the weekday. Total traffic volumes were compiled in fifteen (15) minute intervals over a twenty-four (24) hour period. The raw data sheets, with fifteen (15) minute intervals and peak hours defined for each segment can be obtained in pdf format or hard copy for the cost of reproduction from the Department of Planning & Development Services.

Definitions

Ref. # - The number associated with a one-directional traffic count location.

Segment – A particular area of roadway, with a beginning point (“*From*”) and an end point (“*To*”) location.

Direction – The direction of traffic flow for each location. Each location has two directions, each listed in a separate row in Table 1, for both northbound and southbound (*NB, SB*) or westbound and eastbound (*WB, EB*).

24-Hour Totals – The total traffic volume (each direction) counted during the 24-hour period from 12 a.m. (midnight) to 12 a.m. (midnight) the following day.

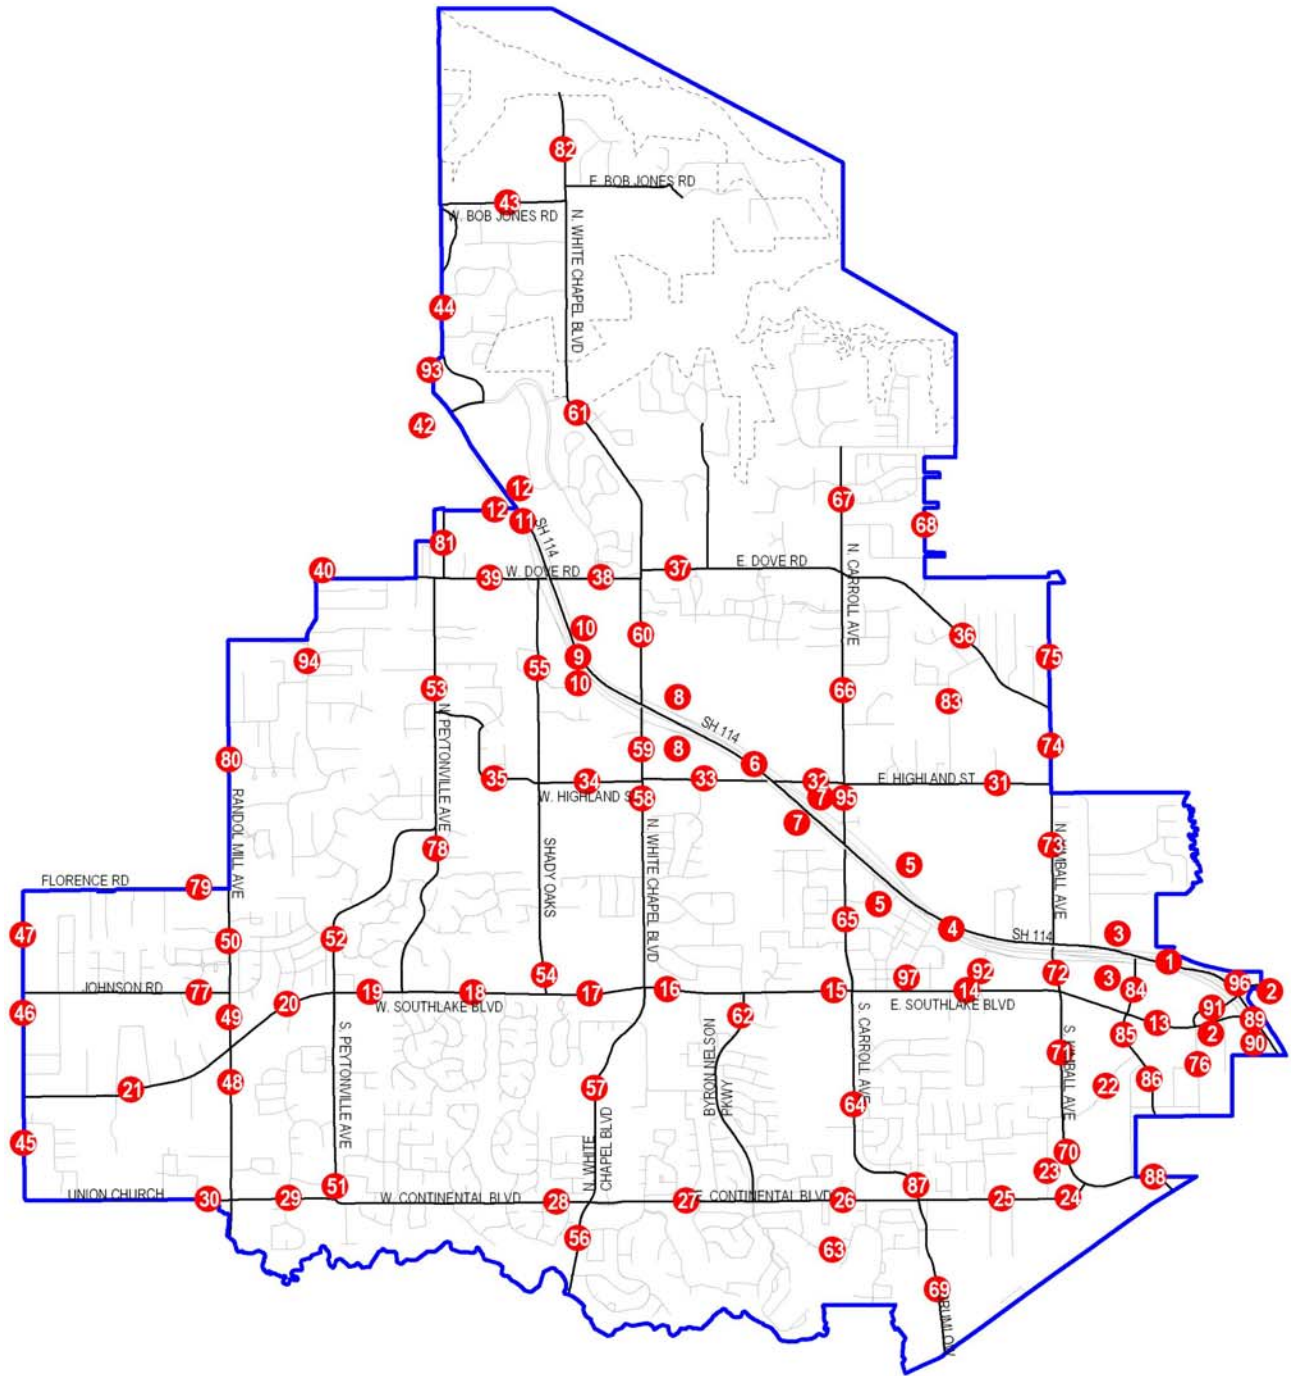

A.M. Peak Hour – The one-hour time period between 12 a.m. (midnight) and 12 p.m. (noon) during which the highest one-hour traffic volume occurs, and the associated count.

P.M. Peak Hour – The one-hour time period between 12 p.m. (noon) and 12 a.m. (midnight) during which the highest one-hour traffic volume occurs, and the associated count.

EBFR – East Bound Frontage Road

WBFR – West Bound Frontage Road
